SITE, SEO & AI-SEARCH AUDIT · GROWTH PROPOSAL

Hello Signature Law. We're legalbuzz.

We audited your website, your structured data, your mobile speed and your public record the way a prospective client's search actually meets them. This is what we found, what we could not measure yet, and what we would do about it.

OVERALL SITE SCORE

32 /100

9 categories scored out of 10.
Authority/backlinks excluded — not measured.

Bowral, NSW 2576

EVIDENCE COLLECTED
27 October 2026
UTC · 28 Oct AEDT

ROUND
1 — read-only
Nothing was changed on your site

This document separates **what we measured** from **what we could not measure yet**. Five areas — keyword rankings, search volumes, cross-domain traffic share, AI-platform visibility and backlinks — require tracking tools that were not connected when this round was run. They are shown throughout as NOT MEASURED with the reason, never as a zero and never as an estimate.

BEFORE WE START

Six questions to open the call

Each of these blocks a decision we cannot make for you. We have deliberately not guessed at any of them, and nothing in this document asserts an answer.

01 · OFFICES

Do you trade from Moss Vale?

Your LinkedIn page lists a second office at 348–354 Argyle Street, Moss Vale NSW 2577. Your website names only Bowral, on every page. If Moss Vale is live, it currently has no page, no address and no local signal anywhere.

02 · BRANDS

What is "The HR Brief" for?

It has been a registered business name against your ABN since 26 June 2024 and has no web presence we can find. Is it trading, dormant, or planned? (We checked hrbrief.com.au — it is an unrelated newsletter, not yours.)

03 · GOOGLE PROFILE

Who holds your Google Business Profile?

We could not verify it from outside. That is not the same as saying it does not exist — we need someone signed in to confirm it, because for a single-town firm it is the highest-value asset on this list.

04 · FOUNDING DATE

Which year is right?

The register shows your ABN active from 31 Aug 2015. LinkedIn says founded 2016. Localsearch says "trading for 10 years". We are not calling any of them wrong — but we will not put a "since" claim in front of clients until you confirm which one it is.

05 · TEAM

How many people, and who is client-facing?

Your About page names nine. LinkedIn says 2–10. LawTap tells searchers you have "1 Solicitor". Your own page is almost certainly the right one — but the directories are telling a different story.

06 · MEASUREMENT

Has analytics ever been installed?

We found none — no GA4, no Tag Manager, no pixel. If there was a property once, recovering its history changes what we can show you as a baseline. If not, the baseline starts the day we install it.

Here's what we'll cover today

#	SECTION	WHAT IT ANSWERS	PAGE
1	**Who we are**	How we work, and what we did and did not do	3
2	**What we know so far**	Your entity, your two registered names, the tension in your record	4
3	**Your services and where clients look**	Which pages exist, which carry weight, which are thin	5
4	**How AI has changed search**	What AI assistants can read on your site today	6
5	**Your scores**	Nine categories, your speed, your structured data	7
6	**What we're seeing**	The on-page picture, your listings, your competitors	9
7	**Your SEO and AI action plan**	The one decision, and the prioritised fixes	11
8	**How we'd deliver it**	Three phases, six months, a 90-day measure	13
9	**Summary**	What already works, what needs doing	14
10	**Pricing and working together**	Three scopes, and what we need in writing	15
11	**Full audit and evidence**	Every source, every limitation, every correction	16

WHO WE ARE

Law firms only — and the click is only the beginning.

We work with law firms, and we measure the things that end in an enquiry, not the things that look good in a dashboard.

How we work

- **Evidence and limitations stay separate.** Every figure in this document carries its source, its exact setting and the time it was collected.
- **We reject misleading metrics.** Where the only number available would have overstated your position, we left the space empty and said why.
- **We show our corrections.** When a later round contradicts an earlier one, the correction is printed, not quietly removed.
- **AI search is a first-class surface.** What an assistant can read about you now decides whether it can recommend you later.
- **A failed check is not a zero.** "We could not measure it" and "it is nothing" are different sentences, and we never swap one for the other.

What we measured

- All **46 indexable URLs** on your site, one request per second, in served HTML and again after full browser rendering
- **Lighthouse 12.2.1**, mobile and desktop, on your homepage and your conveyancing page
- Your entry on the **Australian Business Register**, including every registered business name
- Eight **host canonicalisation** variants, your security and cache headers, and your image delivery
- Three **directory listings read in full** — Localsearch, LawTap and LinkedIn

What we did not do

We changed **nothing**. No listing was claimed or edited, no form was submitted, no account was created, no tracker project was set up, and nothing was purchased. This round was entirely read-only, and every finding below describes your site exactly as a visitor met it on 27 October 2026.

We did not measure **rankings, search volumes, cross-domain traffic share, AI-platform visibility or backlinks**. Those need tracking tools that were not connected for this round. Rather than substitute a weaker number that looks like the real one, we have shown each as NOT MEASURED with its reason, and priced the work to establish them separately.

THE HONEST HEADLINE

Your website is well built and badly described. The engineering underneath it is sound — the layer that tells Google, an AI assistant, or a person in Bowral what you do is largely missing.

That is an unusually good position to start from: most of what follows is cheap to fix and none of it requires rebuilding the site.

WHAT WE KNOW SO FAR

02

One entity, two registered names, one town on the website.

We started at the register rather than the website, because the register is the only record neither of us can edit.

Your entity, as the public record holds it

FIELD	VALUE	SOURCE
Entity name	**SIGNATURE LAW PTY LTD**	ABR
ABN / ACN	48 607 957 291 · ACN 607 957 291	ABR
Status	Active from **31 August 2015** · Australian Private Company · GST registered same date	ABR
Main business location	NSW 2576 (Bowral)	ABR
Office shown on your site	49 Bowral Street, Bowral NSW 2576 · PO Box 1566	Your contact page
Office *not* shown on your site	**348–354 Argyle Street, Moss Vale NSW 2577**	Your LinkedIn page
Phone · email	02 4861 2345 · administration@signaturelaw.com.au	Your site
ABN displayed on your website	NOWHERE — checked on all 46 URLs	Our crawl

Your two registered business names

REGISTERED NAME	REGISTERED FROM	VISIBLE ONLINE PRESENCE WE COULD FIND
Signature Law	14 October 2022	Website, Facebook, Instagram, LinkedIn, Localsearch, LawTap, The Fold
The HR Brief	26 June 2024	NONE FOUND — no site, no listing, no mention on signaturelaw.com.au

We checked hrbrief.com.au and read it in full: it is an unrelated weekly HR newsletter published on Ghost, with no lawyer, no ABN and no connection to you. It is listed as a namesake to exclude, not as your property.

The central tension in your record

THREE FOUNDING DATES

ABR: **31 Aug 2015** · LinkedIn: **2016** · Localsearch: **"10 years"**. None is asserted wrong. Until you confirm one, we will not make a "since" claim more prominent than it already is.

THREE HEADCOUNTS

Your About page names **nine people**. LinkedIn says **2–10**. LawTap tells searchers **"1 Solicitor"** and "No lawyers found". The directories are understating you.

A NAMESAKE YOU SHOULD KNOW ABOUT

signaturelaw.co.uk is a UK firm carrying strongly negative public reviews. They are not yours. We have excluded them from every count, and we flag them because a searcher may not.

YOUR SERVICES, YOUR CLIENTS, AND WHERE THEY LOOK

03

Every service has a page. Almost none of them is described.

Six practice areas, six pages, one meta description between them — and that description is on your homepage.

SERVICE PAGE	WORDS	TITLE	META DESC.	H1	OG:IMAGE	WHAT A SEARCHER GETS
Property Law & Conveyancing	492	PRESENT	MISSING	PRESENT	MISSING	Google writes your snippet for you
Employment Law	758	PRESENT	MISSING	PRESENT	MISSING	Your strongest page by depth
Wills & Estates	609	PRESENT	MISSING	PRESENT	MISSING	Reasonable depth, undescribed
Business & Contract Law	381	PRESENT	MISSING	PRESENT	MISSING	Thin for a core service
Workplace Health & Safety	314	PRESENT	MISSING	PRESENT	MISSING	Thin
Litigation & Dispute Mgmt	266	PRESENT	MISSING	PRESENT	MISSING	**Thinnest service page on the site**
Practice Areas (hub)	294	PRESENT	MISSING	PRESENT	MISSING	A list of links, little else
Contact Us	224	PRESENT	MISSING	PRESENT	MISSING	No tappable phone number
Homepage	534	PRESENT	PRESENT	NONE	MISSING	The only described page you have

Where demand actually sits

NOT MEASURED — AND WE WILL NOT GUESS

We have no search volume data for your services or your towns, and no ranking data for any phrase.

Both require a keyword tool and a rank tracker, and neither was connected for this round. We are deliberately not telling you that "conveyancing Bowral gets N searches a month", because we did not measure it and a guess would be indistinguishable from a measurement once it is printed. Establishing this is the first line item in Phase 1 — see page 11. Two rules we will hold to when we do measure it: a missing volume means *unknown*, never zero (small towns are routinely suppressed), and the volumes of overlapping phrases are never added together.

What we can say about your content, because we counted it

34

blog posts, mostly employment-law updates by title — a genuine asset and the clearest signal of where your depth is

3

posts published since the start of 2024 (two in Nov 2024, one in Jul 2026). The archive clusters in 2018–2022

0

pages targeting a town other than Bowral — including Moss Vale, where your LinkedIn says you have an office

Reading of the post titles, not a measurement of demand: your published work is dominated by employment, industrial relations and workplace safety. That is where your depth is, and it is the area a referrer is most likely to be able to describe you by.

HOW AI HAS CHANGED SEARCH

An assistant can only recommend what it can read.

We could not test what the assistants say about you. We could test what they would find if they looked — and that part is measurable.

WHAT WE DID NOT TEST, AND WHY

We did not run discovery or branded questions on ChatGPT, Claude, Gemini, Perplexity, Google AI Overview or AI Mode.

Doing it properly requires a neutral research account on each platform, run in a fresh session, with the question set held identical across platforms. Running them from a personal signed-in account returns a personalised answer, which is not a measurement of anything. No account of that kind was available for this round, so **no mention rate, no citation share and no "AI visibility score" appears anywhere in this document** — not even a rough one. When we do run it, the result will be reported as a sample mention rate per platform, never as market share, and scoped to the platforms we actually tested.

What is measurable today: what an assistant finds when it reads your site

SIGNAL	YOUR SITE	WHY IT DECIDES WHETHER YOU GET NAMED
/llms.txt	404 — ABSENT	The emerging convention for telling an assistant what a site is and which pages matter
LegalService / Attorney schema	ABSENT	You publish a generic `Organization`. Nothing machine-readable says you are a law firm
Address in structured data	ABSENT	An assistant asked for a lawyer *in Bowral* cannot confirm from your markup that you are in Bowral
Telephone in structured data	ABSENT	Your phone number exists only as plain text a model has to infer from
Opening hours / areaServed	ABSENT	Nothing states which towns you serve — so nothing can be matched to a town
Named practitioners	NINE NAMED	**Your strongest AI-readable asset.** Named people with stated roles and specialisms on the About page
Practice-area prose	THIN: 266–758 WORDS	Enough to classify you, rarely enough to prefer you over a firm that explains the process
FAQ / question-shaped content	NONE	Assistants answer questions; pages that answer questions are what they quote
Meta descriptions	1 OF 46 PAGES	The one-line summary both search engines and assistants reach for first
robots.txt	OPEN, CLEAN	Nothing is blocking an assistant from reading you. The gap is what there is to read

THE PATTERN THIS PRODUCES

A model asked "who is Signature Law?" has enough to answer. A model asked "who should I use for conveyancing in Bowral?" has almost nothing to match you on.

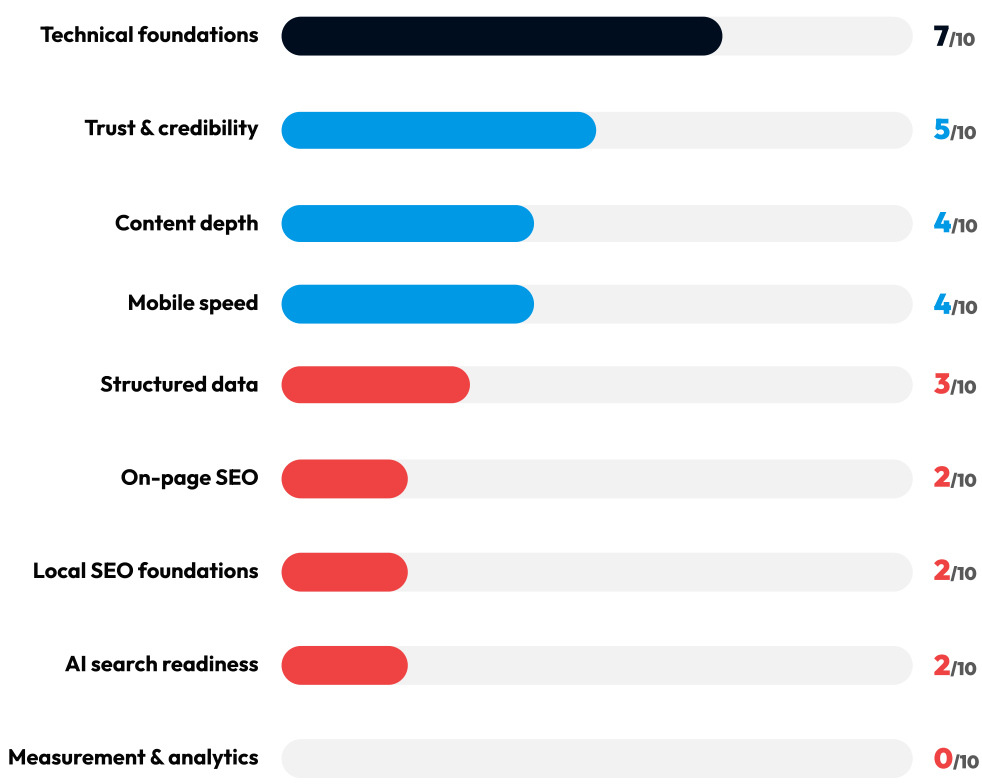

That gap between branded recall and discovery recall is the normal failure mode for a firm with good people and unmarked-up pages — and it is the part that closes fastest, because it is markup and description rather than reputation.

YOUR SCORES

32 out of 100 — and the lowest scores are the cheapest to fix.

Nine categories, each scored out of ten against what we measured. A tenth — authority and backlinks — is not scored, because we did not measure it.

Category scores

Technical foundations	Redirects, robots, sitemaps, user-enumeration blocked, WebP delivery
Trust & credibility	Nine named people and the PSL line — but no privacy policy, no registration numbers
Content depth	34 posts, but service pages run 266–758 words and publishing has largely stopped
Mobile speed	Desktop 93–96. Mobile 67 and 53, with LCP 4.2 s and 6.1 s
Structured data	Yoast defaults only — no LegalService, no address, no phone, no geo
On-page SEO	45 of 46 pages have no meta description; no H1 on the homepage; no H2 anywhere
Local SEO foundations	No tel: links, no address in markup, Localsearch unclaimed, no reviews on listings read
AI search readiness	No /llms.txt, no LegalService markup, no question-shaped content
Measurement & analytics	No GA4, no Tag Manager, no pixel, no conversion tracking of any kind

THE ARITHMETIC, IN FULL

7 + 5 + 4 + 4 + 3 + 2 + 2 + 2 + 0 = **29** out of a possible 90.

29 ÷ 90 = 0.3222… → **32 / 100**

Rounded to the nearest whole number from 32.22. Nine categories scored, not ten: **authority and backlinks is excluded entirely** rather than scored zero, because a zero would be a measurement we did not take.

HOW TO READ THIS

This is **our assessment against what we measured**, not an industry-standard index and not a Google metric. It exists so the same nine categories can be re-scored in 90 days against the same evidence and the movement can be seen.

Bar colour carries no information the number does not — every bar carries its own value. We tested the navy / blue / red palette under protan, deutan and tritan simulation: every pair stays at ΔE ≥ 55. Blue and red differ in hue rather than lightness, which is why the value labels matter.

Speed — the number you would have been told, and the real one

HOMEPAGE

MOBILE	DESKTOP
4.2s	**1.3s**
LCP · perf 67	LCP · perf 93

PROPERTY & CONVEYANCING — YOUR MONEY PAGE

MOBILE	DESKTOP
6.1s	**1.1s**
LCP · perf 53	LCP · perf 96

The caveat that matters. These are **lab** figures from Lighthouse 12.2.1 run locally with the mobile profile throttled to 4× CPU slowdown, 150 ms round-trip and 1,638 Kbps — the same throttling PageSpeed Insights applies. We used it because PSI's own API returned "quota exceeded" on every attempt and its web interface hung on the same backend. An unthrottled browser run would have reported roughly 1–2 seconds and we would have told you mobile was fine. It is not. **Field data from real visitors (CrUX) was not collected, so your real-world speed is unknown rather than confirmed.**

Rankings

CHECK	STATUS	DETAIL
Organic rank (10 phrases × location × device, depth 100), local pack, competitor ranking sets	NOT MEASURED	No rank tracker was connected for this round. Competitors were discovered by name only — see page 9

There is no ranking figure anywhere in this document. Scripted Google fetches 403 after about thirty requests and are not a certified rank, so we did not attempt them. When run properly, each phrase is checked per location, on desktop and mobile separately, to depth 100 — and a phrase we cannot find is "not found at depth 100", never "rank 100".

Structured data and analytics — the status, verified twice

STRUCTURED DATA

Present on every page, identical in served HTML and after full render: **WebPage, WebSite, Organization, BreadcrumbList, ImageObject** — the Yoast default graph.

The `Organization` node carries your name, logo and three social profiles — **no address, telephone, geo, hours or areaServed**, and it is not typed `LegalService`. No microdata found.

For a single-office practice, the highest-leverage markup gap on the site.

ANALYTICS

Nothing is installed.

We checked served HTML, then a real browser render with all sixty network requests captured. There is **no GA4, no gtag, no dataLayer, no Google Tag Manager container, no Meta Pixel, no LinkedIn tag, no Hotjar, no Clarity and no legacy Universal Analytics**. The only beacon is Cloudflare's own Insights script, which does not report to you.

Consequence: no enquiry, call or form submission is attributable today, so there is no baseline until this is fixed.

What is already working — and should not be billed for

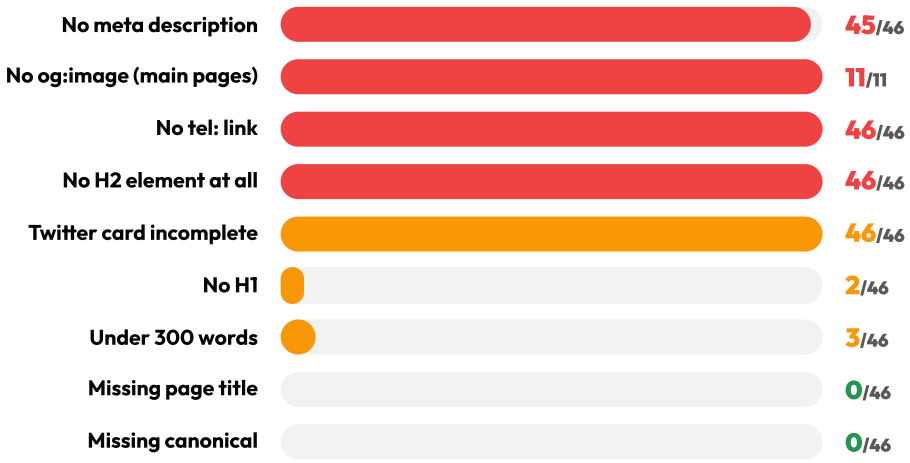

CHECK	RESULT	DETAIL
http→https, www→non-www, trailing slash	CORRECT	All 301 to the single canonical URL, both schemes
Bogus URL, /index.html, user enumeration	CORRECT	Genuine 404s; `/wp-json/wp/v2/users` returns 401
robots.txt and XML sitemaps	CLEAN	Nothing blocked; sitemap declared and valid
Canonical, lang, viewport	PRESENT	On all 46 URLs; `en-AU` correctly set
Image delivery	ALREADY GOOD	WebP via CDN, `vary: Accept`, two-year cache
Minor items	NOTED	`/ABOUT-US/` returns 200 (canonical neutralises it); no HSTS, CSP, X-Frame-Options or Referrer-Policy — negligible SEO effect

WHAT WE'RE SEEING

A well-built site that does not describe itself.

Every bar below is a count from our own crawl of all 46 indexable URLs — not a sample, not an estimate.

On-page defects across all 46 URLs

Red marks a defect on every page or nearly every page; amber a defect on some; green a check that passed outright. Counts are of URLs, not of pages-with-problems weighted any other way. "No og:image" is counted against the 11 main pages, where the absence matters most; across all 46 URLs it is 13.

Your listings, as they actually read

LISTING	CLAIMED	REVIEWS	WHAT IT TELLS A SEARCHER RIGHT NOW
Google Business Profile	NOT VERIFIED	—	We searched by brand, by principal, by address and by both registered names and could not surface it from outside. **This is an unfinished check, not a finding that you have no listing**
Localsearch	UNCLAIMED	0	Phone hidden behind "Show Number". Website given as the old `http://www.` form. "Trading for 10 years"
LawTap	STALE	None shown	Address and phone correct, but "No lawyers found" and "1 Solicitor" — against nine people on your own About page
LinkedIn	ACTIVE	n/a	58 followers. The only public source that lists your Moss Vale office
Facebook	EXISTS	"Not yet rated"	Seen in search results only — **we did not read the page in full, so nothing here is asserted about it**
The Fold	NOT VERIFIED	—	The page returned a bot-verification screen. We make no claim about what it contains

Scoped exactly: across the listings we read in full, you have **no reviews on Localsearch, none shown on LawTap, and Facebook shows "not yet rated"**. We are *not* saying you have no reviews anywhere — your Google profile is precisely the one we could not verify, and it is usually where a law firm's reviews actually sit.

Traffic distribution — and why this page has no chart on it

Compatible keyword-level cross-domain traffic data unavailable.

A proposal of this kind normally carries a chart titled "Estimated organic traffic distribution within covered results", showing how the traffic available on your service phrases divides between you, other firms, government and directory sites. It requires one specific metric — estimated organic traffic for a single keyword at a single domain — from a tool that was not connected for this round.

We could have filled this page. Domain-level traffic estimates are easy to obtain and would have produced a confident-looking chart. They answer a different question — all traffic a domain gets from every keyword it ranks for — and presenting one in place of the other would have misstated your position in either direction. So the item stands as **not measured**, with the reason, and no substitute number appears.

Backlinks

NOT MEASURED No backlink index was connected for this round, so this document contains **no link count, no referring-domain count, no anchor-text table and no authority score**.

When we do run it we pull from two indexes separately and show both, because they disagree substantially — and we never average them or pick the flattering one. We also note here, so it is on the record rather than a surprise later: link data can never show who placed a link or whether you commissioned it. If anything unusual appears, it will come to you as a question with counts and first-seen dates attached, **never as an allegation and never as a disavow we ran on your behalf**.

Your local market — discovered, not assigned

FIRM	ADDRESS AS PUBLISHED	OVERLAP WITH YOU
Stacks Law Firm (Bowral)	1/10 Boolwey Street, Bowral NSW 2576	Conveyancing among its listed practice areas
Highlander Law (hlaw.au)	Suite 7F, 295 Bong Bong Street, Bowral NSW 2576	Property and conveyancing
Oxley Law	11/11–13 Bundaroo Street, Bowral NSW 2576	Property law and conveyancing
KQ Lawyers	Bowral — serving Moss Vale and Mittagong	Property and conveyancing; its listing says it serves Moss Vale and Mittagong
Highlands Legal Centre	Southern Highlands	Conveyancing, property, estate planning
Our Lawyers	Mittagong, Bowral, Picton	Conveyancing; its site names Mittagong, Bowral, Picton and Moss Vale
Bowral Conveyancing Centre	Bowral	Conveyancing only — not a law firm

No competitor weakness is claimed in this document, because we measured none of them. This list was discovered from search results, not supplied to us, and the addresses are as each firm publishes them. We have not crawled their sites, checked their speed, counted their reviews or measured their rankings. The one observation we will make, from search results rather than a full site read: **at least two (KQ Lawyers and Our Lawyers) name Moss Vale and Mittagong explicitly. You name no town but Bowral.**

YOUR SEO AND AI ACTION PLAN

07

One decision first, then nineteen fixes in a deliberate order.

The decision is yours and it changes the shape of everything after it. The fixes do not change, only their scope.

The decision: how many places, and how many brands?

OPTION A — **WE RECOMMEND**

One brand, one town

Signature Law, Bowral. Everything — markup, listings, content — points at one address and one name. Fastest to a result, cheapest to run, and the strongest single local signal.

It depends on one thing: that Moss Vale is not a trading office. If it is, this option leaves a real office invisible and Option B becomes correct instead.

OPTION B

One brand, two towns

Signature Law with genuine Bowral and Moss Vale presences — a real page per office, separate markup, and a listing for each.

Fair to it: if you do trade from Moss Vale, this is simply the honest description of your business, and several competitors already market that town. It costs more, takes longer to mature, and demands that the second office have real staffed substance — a page for an address you rarely attend damages trust rather than building it.

OPTION C

Two brands

Signature Law for legal work, The HR Brief developed as a separate employment/HR-facing property.

Fair to it: your published work is dominated by employment and industrial relations, so there is real substance behind the second name, and it would reach an audience the law-firm brand does not. But it splits a small firm's attention and authority across two properties, and we would not start here. It is a decision to revisit once the first one is working — not a reason to delay this.

Our recommendation is Option A, and it is conditional. We are recommending it on the explicit assumption that Bowral is your only trading office. That assumption has not been confirmed — your own LinkedIn page contradicts it. **If you tell us Moss Vale trades, our recommendation changes to Option B on the spot**, and we would rather change it now than defend it later.

The prioritised plan

#	ACTION	IMPACT	EFFORT	DEPENDS ON
1	**Install GA4 and connect Search Console**	CRITICAL	LOW	YOU — account access
2	**Claim and verify the Google Business Profile**	CRITICAL	LOW	YOU — ownership, and confirmation it exists
3	Write meta descriptions for all 45 pages, service pages first	CRITICAL	MEDIUM	—
4	Add an H1 to the homepage; convert section headings to H2	CRITICAL	LOW	—
5	`LegalService` schema: address, phone, geo, hours, areaServed	CRITICAL	LOW	Decision above
6	Make every phone number a `tel:` link	CRITICAL	LOW	—
7	Establish the ranking and keyword baseline (10 phrases, both devices)	CRITICAL	MEDIUM	YOU — tool budget
8	Fix mobile LCP on the service pages (6.1 s → under 2.5 s)	CRITICAL	MEDIUM	—

#	ACTION	IMPACT	EFFORT	DEPENDS ON
9	Add `og:image` and complete Twitter cards on the 11 main pages	HIGH	LOW	—
10	Claim Localsearch; correct LawTap's "1 Solicitor"	HIGH	LOW	YOU — listing ownership
11	Publish a firm privacy policy	HIGH	LOW	YOU — sign-off
12	Deepen the three thinnest service pages (Litigation, WHS, Business)	HIGH	MEDIUM	YOU — review
13	Add `/llms.txt` and question-shaped content to service pages	HIGH	LOW	—
14	Fix 6 unnamed links and 10 contrast failures	MEDIUM	LOW	—
15	Establish the AI-visibility baseline across six platforms	MEDIUM	MEDIUM	YOU — research accounts
16	Two-index backlink baseline and competitor link gap	MEDIUM	MEDIUM	YOU — tool budget
17	Display the ABN; update the 2020 copyright; add registration details	MEDIUM	LOW	YOU — confirm details
18	Restart publishing — employment law, where your depth already is	MEDIUM	MEDIUM	YOU — input
19	Add security headers; 301 the uppercase URL variant	LOW	LOW	—

Why this order

MEASUREMENT BEFORE EVERYTHING

Items 1 and 7 come first because without them nothing that follows can be shown to have worked. Fix the site first and measure second, and every gain becomes invisible — **a baseline taken late cannot be recovered retrospectively.**

THEN THE CHEAP, CERTAIN WINS

Items 3 to 6 are low-effort, site-wide and need nothing from you beyond the architecture choice. None of them should wait for content, budget or a competitor analysis.

SPEED WHERE IT CONVERTS

Item 8 sits above content work because your conveyancing page — the one most likely to be reached by someone ready to instruct — is your slowest on mobile, at 6.1 seconds.

TRUST AND CONTENT LAST, DELIBERATELY

Items 11 to 18 need your time and judgement. They are valuable and easy to stall on, so they follow the fixes that need nothing from you. **Nothing in items 1 to 10 is blocked by them.**

What we would not do

NOT RECOMMENDED	WHY NOT
Rebuild the website	The engineering is sound; the problem is description, not construction. A rebuild would discard work that is already correct
Optimise your images	Already handled — WebP via CDN with a two-year cache. We would be billing for work already done
Build location pages for towns you do not serve	Until Moss Vale is confirmed, a page for it is a claim we cannot support
Buy links, or run outreach against your current profile	We have measured no backlink data; acting on an unmeasured picture is guesswork
Chase a competitor's keyword set	We have not measured a single competitor; a "gap analysis" today would rest on names and addresses, not evidence

HOW WE'D DELIVER IT

Fix, build, then earn trust and measure.

Three phases over six months. The first needs almost nothing from you.

PHASE 1 · WEEKS 1–4

Fix

Analytics and Search Console live. Ranking baseline. 45 meta descriptions, homepage H1, heading structure, `LegalService` schema, `tel:` links, Google Business Profile claimed.

Outcome: you can see what is happening, and every page describes itself.

PHASE 2 · WEEKS 5–14

Build

Service-page mobile LCP under 2.5 s. Three thinnest practice areas deepened. Social cards, `/llms.txt`, question-shaped sections, privacy policy, accessibility fixes, listings corrected.

Outcome: the pages are worth arriving at.

PHASE 3 · WEEKS 15–26

Earn trust & measure

Publishing restarted in employment law. Reviews. Backlink and AI-visibility baselines. Re-score of all nine categories against the same evidence.

Outcome: a second data point, and proof of movement or its absence.

Six-month workstream

WORKSTREAM	M1	M2	M3	M4	M5	M6
Measurement	INSTALL	VERIFY	REPORT	REPORT	REPORT	RE-SCORE
On-page	ALL 45	HEADINGS	SOCIAL CARDS	REFINE	—	—
Structured data	LEGALSERVICE	PER-PAGE	FAQ MARKUP	VALIDATE	—	VALIDATE
Speed	DIAGNOSE	SERVICE PAGES	SITEWIDE	VERIFY	—	VERIFY
Local & listings	GBP CLAIM	LOCALSEARCH	LAWTAP	CITATIONS	CITATIONS	AUDIT
Content	—	LITIGATION	WHS	BUSINESS	PUBLISHING	PUBLISHING
Trust	—	PRIVACY POLICY	ABN, FOOTER	REVIEWS FROM COMPLETED MATTERS		
Authority & AI	—	—	LLMS.TXT	LINK BASELINE	AI BASELINE	GAP WORK

The 90-day measure

WHAT	TODAY	AT 90 DAYS	HOW WE'LL KNOW
Pages with a description; machine-readable address and phone	**1 of 46; address and phone absent**	46 of 46; present and validating	Re-crawl; Rich Results Test
Attributable enquiries	**None — nothing is tracked**	Every call and form	GA4 with call and form events
Mobile LCP, conveyancing page	**6.1 s**	Under 2.5 s	Lighthouse, identical throttling
Ranking position, 10 phrases	**Unknown — not measured**	A real baseline plus one re-measure	Rank tracker, both devices, depth 100
Google Business Profile	**Unverified**	Claimed and complete	Signed-in confirmation

Goals, not guarantees. The last two rows depend on competitors and on access only you can grant.

SUMMARY

Good bones, no voice, no instruments.

The expensive things are already right. The cheap things are almost all wrong. That is the best version of this problem.

ALREADY WORKING

- Redirects are correct in every direction we tested — http, www, trailing slash
- robots.txt and four XML sitemaps are clean and declared
- Canonicals, `lang="en-AU"` and viewport on all 46 URLs
- WordPress user enumeration is blocked
- Images already serve WebP through a CDN with a long cache
- Nine named team members on the About page, with roles and bios — your best asset for both search and AI
- 34 blog posts establishing real depth in employment and industrial relations
- Desktop performance of 93 and 96
- The Professional Standards Legislation line is present

NEEDS DOING

- 45 of 46 pages have no meta description
- No analytics of any kind — nothing is attributable today
- Mobile LCP of 6.1 s on your main conveyancing page
- No address, phone, geo or hours in your structured data
- No `tel:` link anywhere, including the contact page
- No H1 on the homepage; no H2 on any page
- No `og:image` on any of the 11 main pages
- Localsearch unclaimed; LawTap says you have one solicitor
- No firm privacy policy; footer still reads 2020
- Rankings, volumes, traffic share, AI visibility and backlinks all unmeasured

Why legalbuzz

We only do law firms. The structured data, the directories and the trust signals that matter to a practice are not the ones that matter to a retailer, and we are not learning them on your time.

We showed you the empty boxes. Five sections of this document say "not measured" and explain why. Any agency can fill those pages. We would rather you knew which numbers were real.

We flagged the number that would have flattered us. An unthrottled speed test would have let us report 1.3 s and claim your site was fast. The honest mobile figure is 4.2 s and 6.1 s, and it is in the summary above.

THE ONE-SENTENCE VERSION

You have a sound website that tells Google and its AI successors almost nothing about who you are, where you are or what you do — and you currently have no way of knowing what that is costing you.

PRICING AND WORKING TOGETHER

10

Three scopes. No fee in this document is invented.

Every fee reads "to be confirmed" — we will not print a number we have not agreed with you.

FOUNDATION

Fix what is broken

To be confirmed

Actions 1–6 and 9: analytics, 45 meta descriptions, headings, `LegalService` schema, `tel:` links, social cards, one verifying re-crawl.

No ranking, backlink or AI measurement.

GROWTH — RECOMMENDED

Fix, measure, build

To be confirmed

Foundation plus the ranking baseline, mobile speed work, three thin service pages rewritten, listings, privacy policy, `/llms.txt` and the 90-day re-score.

Why this one: the smallest scope that both fixes the site and can prove it worked.

FULL

Everything, including authority

To be confirmed

Growth plus the two-index backlink baseline and link gap, six-platform AI baseline, ongoing publishing, reviews and 15–20 directory citations.

For competing on regional phrases, not just Bowral.

Two costs are third-party and declared before anything is spent: rank-tracking and backlink subscriptions are billed by quota, and a Maps grid scan is charged per pin (39 pins = 39 points) — never run without a centre point you have confirmed.

Website options

We are **not** proposing a rebuild — your site is well constructed. Design changes you want for your own reasons would be scoped separately, not bundled into SEO work.

What happens after today

STEP	WHAT	WHO
1	You answer the six questions on page 2 — above all Moss Vale and the Google profile	YOU
2	We confirm the architecture recommendation, or change it to Option B	legalbuzz
3	You pick a scope; we return a fixed fee against that scope in writing	Both
4	You grant access: WordPress, Google Business Profile, analytics, domain DNS if needed	YOU
5	We take the baseline *before* changing anything; Phase 1 begins, first report at 30 days	legalbuzz

What we need in writing before an agreement

From you: confirmation of your trading offices and brands · ownership of each directory listing · the founding date you stand behind · your registration and insurance details as you want them published · confirmation of who may approve published content.

From us: a fixed fee against a named scope · the third-party tool costs, declared before they are incurred · what we will measure and how · what we will not claim · and the undertaking that any correction to our own findings is published to you, not quietly removed.

FULL AUDIT AND EVIDENCE

Every number above, and where it came from.

Collected 27 October 2026 UTC — 28 October AEDT in Bowral. Read-only throughout.

Sources and settings

CHECK	TOOL AND EXACT SETTING	COLLECTED UTC	STATUS
Full site crawl, 46 URLs	Python + BeautifulSoup, 1 request/sec, desktop UA, served HTML	13:36–13:38	46 OF 46 OK (1 transient proxy error, retried successfully)
Rendered-DOM verification	Playwright / Chromium, networkidle + 3 s, 60 requests captured	13:41	MEASURED
Speed, 2 pages × 2 form factors	Lighthouse 12.2.1 local. Mobile: 412×823, simulated, 4× CPU, 150 ms RTT, 1638.4 Kbps. Desktop: 1350×940, 1× CPU, 40 ms RTT, 10240 Kbps	13:45–13:47	MEASURED — lab only
Company register	Australian Business Register — name search, then ABN detail view	13:44	13 ROWS
Host canonicalisation	curl, 8 variants, redirect chains recorded	13:43	8 OF 8
Headers, image negotiation	curl with `Accept: image/webp`	13:52	MEASURED
Listings read in full	Localsearch, LawTap (firm + principal), LinkedIn	13:49–13:51	4 PAGES
PageSpeed Insights	PSI API v5, then the PSI web interface	13:45	FAILED — HTTP 429 daily quota on all 4 runs; UI hung on the same backend
The Fold listing	Direct page read	13:50	FAILED — bot-verification screen. Not verified; no mismatch asserted
Google Business Profile	Searched by brand, principal, address, both registered names	13:49–13:51	UNFINISHED — not surfaced. **Not evidence of absence**
Rankings · volumes · traffic share · AI visibility · backlinks	—	—	NOT SUPPORTED — no rank tracker, keyword tool or link index was connected

How the traffic metric was handled

The required metric is estimated organic traffic for **one keyword at one domain**. Before using any such figure we apply an arithmetic acceptance test: sum the traffic column across every returned row and compare it to the domain's reported organic traffic. If the rows sum to approximately the total and no single row equals or exceeds it, the metric is row-level and we accept it. Otherwise we reject it.

Metrics we reject on sight, because each answers a different question: per-URL "total traffic" in a SERP overview (it counts every keyword that URL ranks for); domain-level traffic in a competitive-research overview; and any vendor's domain-level traffic estimate.

For this round the test was never reached, because no tool offering the metric was connected. The finding stands as printed on page 9: *Compatible keyword-level cross-domain traffic data unavailable.* No domain-level figure has been substituted anywhere in this document.

Namesakes excluded from every count

NAME	WHY IT IS EXCLUDED
signaturelaw.co.uk	A United Kingdom firm. Its public review profile carries strongly negative reviews that are **not yours** and must never be attributed to you. The highest-risk namesake on this list
Eleven other "Signature"-style ABNs	Separate entities returned by the same register search — in QLD 4352, NSW 2044, 2174, 2195, 2026, 2767, 2145, VIC 3170 and elsewhere. None is you
hrbrief.com.au	Read in full: a weekly HR newsletter on Ghost, with no lawyer, no ABN and no connection to Bowral. **Not** your "The HR Brief" business name
Elizabeth Kenny (Wikipedia)	A historical Australian bush nurse. Unrelated to your principal of the same name

Limitations that bound every conclusion in this document

LIMITATION	WHAT IT MEANS FOR THE CONCLUSIONS ABOVE
No ranking data	Nothing here describes where you appear in a search result for any phrase, at any location, on any device. No statement in this document should be read as one
No search volume data	Nothing here describes how many people search for your services or your town. We have not sized your market, and a missing volume would mean unknown, never zero
No cross-domain traffic data	Nothing here describes your share of anything. The category and percentage analysis a proposal normally carries is absent, not estimated
No AI-platform testing	We have not tested what any assistant says about you. Section 4 describes only what is machine-readable on your own site. If we later report a mention rate it will be scoped to the platforms tested and labelled a sample rate, never share of voice
No backlink data	No link count, no referring domains, no anchor text, no authority score. No risk claim of any kind is made about your link profile
Speed is lab, not field	Lighthouse under simulated throttling. CrUX field data was not collected, so your real visitors' experience is unknown rather than confirmed, and the 4.2 s and 6.1 s figures are lab measurements
Google profile unverified	Every statement about reviews is scoped to the three listings we read in full. We do not claim you have no reviews, and we do not claim you have no profile
Competitors unmeasured	The firms on page 9 were discovered, not analysed. No claim about any of their sites, speeds, rankings or weaknesses appears in this document
Citations partially checked	Three listings of a 15–20 target were read. The rest is outstanding, and The Fold specifically is unverified
One crawl, one day	Everything describes 27 October 2026. A site that changes weekly would need re-checking before any of it is acted on

Corrections to our own work

This is round one, so there is nothing yet to correct. We print this section empty rather than omit it, because it will not stay empty. Audits of this kind routinely revise their own first draft: a listing wrongly called a duplicate, a "no listing found" that a fourth search disproves, a stale-address claim the live page does not support, a links-versus-domains count stated in the wrong unit.

When that happens the corrected finding **replaces** the original here, visibly, with both versions shown and dated. We do not quietly edit a number and reprint the document. Two items on this round are already the most likely candidates: the Google Business Profile we could not verify, and the Moss Vale office we found on LinkedIn and nowhere else.

WHAT WE DID NOT DO, RESTATED PLAINLY

We changed nothing on your website. We claimed no listing, submitted no form, created no account, bought nothing, and set up no tracking project. We spent no money on your behalf and incurred no chargeable action. Everything in this document was obtained by reading what is already public.
